

The Emperors New Vaccine

Freely after Hans Christian Andersen

Once upon a time, there was an emperor. He was very interested in medication, and he used lots of medication himself for all kinds of health problems from head to tail. When someone asked: "Where is the emperor?", then his waiter would usually answer: "The emperor is in the medical cabinet."

Then one day a couple of salesmen appeared from the pharmaceutical company "Muck Pharma". They talked about their wonderful new vaccine. It could prevent serious illnesses in children, and it could even be used to reveal the less intelligent people. Because if a person claimed that this vaccine caused any side effects or did not work, then you would immediately know, that this person was stupid, unable and resistant to facts.

Now that was really valuable, so the emperor immediately ordered his Minister of Health to get the approval procedure going, so this vaccine could be purchased and offered to all the children in the empire.

The salesmen invited the Minister of Health and the bigwigs from the Department of Health for dinner in the finest restaurant in the city. The next morning, they all bought stock in Muck Pharma, because this stock would obviously rise in value, when the new vaccine got approved.

The salesmen from Muck Pharma brought many big boxes of papers, that should document the efficacy and safety of the vaccine, and the Minister of Health ordered the Department of Health to review the papers.

The papers contained all kinds of details about the new vaccine. You could even read where the raw material for the aluminum additive in the vaccine came from. And somewhere in all the papers, you could read a little note about how toxic aluminum is for the brain. You could also read many pages with detailed information about each one of the thousands of children, who had participated in vaccine trials. There were daily reports for each child during the trial period. Among the many details about the children, you could also read what side effects the children had experienced from the vaccine. It appeared in the reports, that it was unlikely that these side effects were caused by the vaccine. Some children, who had experienced serious side effects, were kicked out of the trials because of "cooperation problems". But the Department of Health did not have the time to study all these details.

It would take a long time to review this new vaccine with such a huge amount of papers in the documentation, but the emperor insisted on a quick approval.

The Department of Health did not have the time to review all these papers, so they mainly looked at the conclusions from the trials. The conclusions said, that the vaccine was effective and well tolerated. The salesmen added, that if anybody claimed something else, then they were stupid, unable and resistant to facts.

And then the vaccine was approved and purchased for all small children in the empire.

Soon thereafter the physicians began to vaccinate the children. Some of the children got fever, headache, joint pain or intestinal disease. Some began to suffer from ADHD, learning disabilities or autism. It was clear that some children did not tolerate this vaccine. But nobody dared to say so, because then they would be accused of being stupid, unable and resistant to facts.

Then one day there was a boy named Peter, who got a little brother. Peters little brother soon came to the physician to get his vaccination. After the vaccination, Peters little brother started to cry. He got a fever and became quite ill. The physician realized that there was a connection between the vaccine and the illness, but he did not dare to report this side effect, because then he would be considered stupid, unable and resistant to facts, and he might loose his authorization to practice as a physician.

Peter understood, that his little brother had become ill from the vaccine, and he said: "The vaccine is dangerous." He said that to his parents, his friends in school and anybody, who came to visit.

One day aunt Maude and uncle Matt came with their children to visit. They lived far away on a small island, and they had not heard about the new vaccine, so their children were not vaccinated, but they were healthy and intelligent, and they seldom had any illness. Maude found it strange, that Peters little brother was so ill, and she believed in Peter, when he said that the vaccine was dangerous. Maude also started saying that the vaccine was dangerous, and so did Matt. Peters mom and dad had to face the fact, that the vaccine was dangerous.

So they started telling others, that the vaccine was dangerous, and if anybody claimed, that they were stupid, unable and resistant to facts, then they would say: "Maybe it is you who are stupid, unable and resistant to facts. We have seen with our own eyes, what this vaccine did to our child."

Others, who had seen the bad side effects from the vaccine, also started saying that the vaccine was dangerous, and soon the message had spread to the whole population, and nobody would let their child vaccinate any more. Clever men and women began to help the vaccine injured children the best they could with cleansing the toxins from the vaccine out of their bodies and cure them from the vaccine injuries.

The newspapers would not write, that the vaccine was dangerous, because it might not be good for their reputation, if they were considered stupid, unable and resistant to facts. The newspapers also wanted to continue making money from advertising for Muck Pharma.

And the Emperor would not change his mind about the vaccine, because he could not admit, that he had been fooled by the salesmen from Muck Pharma. So the vaccine was still being offered even though nobody would receive it any more.

Scientific vaccinestudies

The above story was written in order to make the general population aware of the harmful effect of vaccines. This is supported by newer research. Below are a couple of examples of this research.

Vaccination and Health Outcomes **by Professor Anthony Mawson et. al.**

Ref: <http://newamericannews.com/wp-content/uploads/2017/02/MAWSON-STUDY.pdf>

This study was published in 2016. It was done on 666 American children aged 6 to 12 years. 405 of the children were vaccinated and 261 were un-vaccinated. Some of the findings from the study are seen in the table below:

Chronic Disease	Vaccinated	Un-vaccinated
Allergic rhinitis	10.4%	0.4%
Allergies	22.2%	6.9%
ADHD	4.7%	1.0%
ASD (autism)	4.7%	1.0%
Eczema	9.5%	3.6%
Learning Disability	5.7%	1.2%
Neurodevelopment Disorder	10.5%	3.1%
Any Chronic Condition	44.0%	24.9%

The Introduction of Diphtheria-Tetanus-Pertussis and Oral Polio Vaccine **Among Young Infants in an Urban African Community: A Natural Experiment** **by Søren Wengel Mogensen et. al.**

Ref: [http://www.ebiomedicine.com/article/S2352-3964\(17\)30046-4/pdf](http://www.ebiomedicine.com/article/S2352-3964(17)30046-4/pdf)

This study was published in 2017.

Conclusion from the study: "DTP [vaccine] was associated with 5-fold higher mortality than being unvaccinated. No prospective study has shown beneficial survival effects of DTP."

Increased Risk of Noninfluenza Respiratory Viral Infections Associated With Inactivated Influenza Vaccine by professor Benjamin Cowling et. al.

Ref: <http://novaccine.com/wp-content/uploads/2014/03/Increased-Risk-of-Noninfluenza.pdf>

The trial was published in year 2012. It showed, that those who received the flu shot had a 4.4 times increase in non-flu respiratory viral infection compared to placebo. Those who received the flu shot also had 1.3 times higher incidence of flu compared to placebo, when all types of flu are added up.

What can you do?

Share and pass on these pages in order to make others aware of the dangers of certain vaccines.

The HPV-vaccine is being deselected by the majority of girls in Denmark after enlightenment about severe side effects. In Japan the HPV-vaccine is no longer part of the vaccination program because of the severe side effects, that some Japanese girls experienced. Enlightenment is the way to go.

Lets enlighten people about the side effects from the unsafe vaccines in order to make more people choose not to let their children get vaccinated with these types of vaccines. This will benefit the health of those children.
